

Abscess

Post Operative Care:

- Abscess cavity may be packed with gauze, allowing wound to heal inside out
- Change packing daily (placing gauze into base of open wound)
- May shower, allow water to rinse wound well
- Pat dry and re-pack with gauze

Contact Our Office When:

- Incision becomes red and/or swollen
- Increased drainage
- You develop temperature higher than 100
- Any questions/concerns arise
